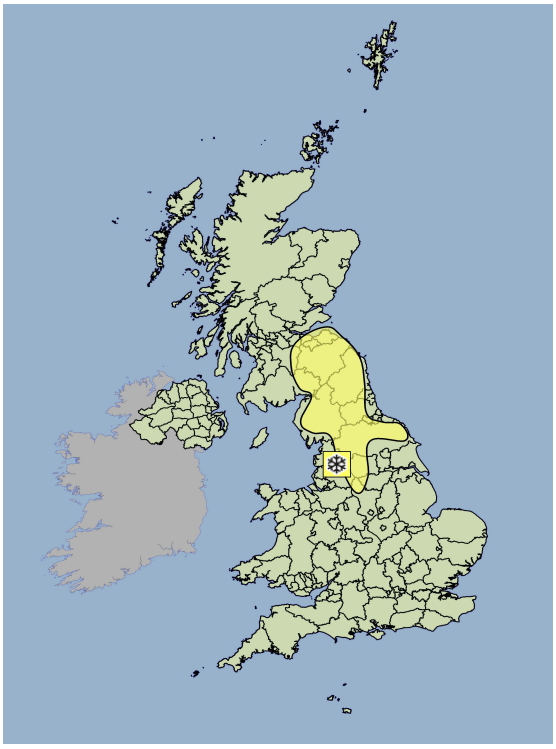
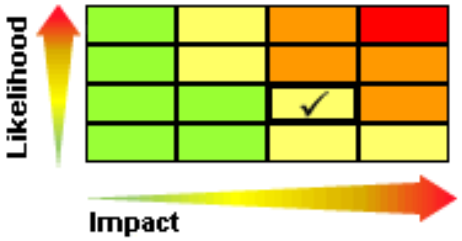
National Severe Weather Warning Service





Chief Forecasters Assessment
A complex area of low pressure is tracking eastwards across northern England. Snow has already fallen, chiefly over hills, but also to lower levels inland, for example in parts of Cumbria. The warning area picks out where we currently expect the worst of the snow, but some smaller amounts of snow may be expected rather more widely. It should also be noted, however, that some areas will see only small amounts due to the showery nature of the precipitation.

The Met Office have issued a **Yellow Warning** of **Snow**

Valid from **03:15 on Thu, 14th Jan 2016** until **15:00 on Thu, 14th Jan 2016**

Further outbreaks of rain, sleet and snow are expected during Thursday morning, clearing from the north and west through the day. The heaviest snow is still expected to affect parts of southeast Scotland (for which a separate Amber warning is in force) and upland areas of northern England, including cross-Pennine routes, where 3 to 6 cm may fall in a number of areas, with possibly as much as 10 cm locally, mainly above elevations of 200 metres. Ice will be an additional hazard as the sleet and snow clears from southeast Scotland.

Please be aware of the risk of disruption to travel, and take appropriate precautions before undertaking journeys. It will also be worth keeping fully up to date with the latest forecasts - details of amounts and areas affected may well change.

This is an update to extend the warning area to include the North York Moors, whilst at the same time trimming the northwestern limit over Scotland - now covered by a separate ice warning - and to cease the warning by mid afternoon.
